

# Autodesk Construction Cloud (ACC) is joining Autodesk Forma

Effective March 24, 2026

## WHAT TO EXPECT

### WHAT'S CHANGING

#### UI updates to reflect Forma brand

- ACC logo will change to Autodesk Forma
- Docs will appear as Data Management
- Account Admin will change to Hub Admin
- Navigation to other Forma solutions will surface
- ACC Mobile App will be re-named to Forma

### WHAT'S NOT CHANGING

#### Experience you know today

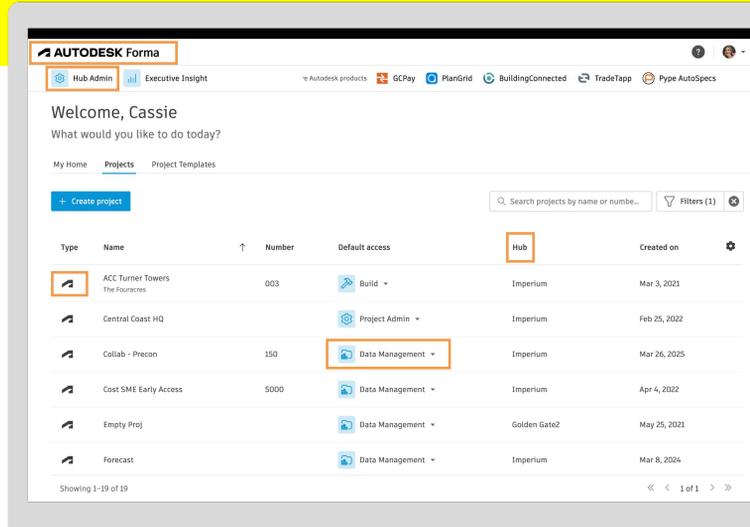

- No changes to URLs, logins, APIs or integrations.
- No changes to licensing or user provisioning.
- No changes to workflows or automations setup in ACC.
- No data migration. All projects, members, settings and data remains as is.

### NEW BRANDING

#### Forma Brand Updates

Autodesk Docs will be renamed to **Forma Data Management**, serving as the common data environment across the Forma industry cloud. Additionally, several existing product names will be updated to reflect their inclusion in Forma. Beginning March 24, these new names will appear across our websites, contracts, licensing, and Autodesk Account. No action is required from you.

- Autodesk Docs → **Forma Data Management**
- Autodesk BIM Collaborate Pro → **Forma Design Collaboration**
- Autodesk Build → **Forma Build**
- Autodesk Takeoff → **Forma Takeoff**
- Autodesk Estimate → **Forma Estimate**
- Preconstruction Bundle → **Forma for Preconstruction**
- Model Management Bundle → **Forma for Model Management**
- Construction Operations Bundle → **Forma for Construction Operations**

# FAQs

## **What is the Forma industry cloud?**

The Forma industry cloud is Autodesk's AI-native platform for the AECO industry that connects all stakeholders, fragmented workflows, and data into a single, insight-driven environment. This helps support more informed decision-making across planning, design, construction and operations.

## **Is Forma replacing Autodesk Construction Cloud (ACC)?**

No, Forma is not ACC. Rather, we are expanding the Forma industry cloud by adding the capabilities of ACC to it. ACC products will be represented as part of the Forma industry cloud brand. In fact, ACC's enterprise controls, infrastructure, and user management will now extend across all of Forma. By bringing ACC into Forma, we're creating a single, connected industry cloud for all of AECO.

## **Will this impact current product roadmaps?**

No. Current product roadmaps will continue to be delivered as planned. In fact, joining the Forma industry cloud provides us with more scale and accelerates our development. For you, that should mean a more seamless experience and accelerated delivery of new tools designed to help you work smarter.

## **Will there be changes to current ACC product capabilities, modules, or workflows?**

No, there will be no disruption to how existing customers access or use ACC products. Licensing, subscriptions, files, permissions, folder structures, and current connections to other ACC products like BuildingConnected will remain intact. Additionally, any automations, integrations or APIs currently in place will not be affected. And, importantly, there will be no data migration required for current ACC or Forma customers.

A single, common data environment and platform across AECO will enable improved data flow across the project lifecycle and introduce more AI-native workflows.

## **Will the ACC mobile app change in any way?**

Outside of branding, we do not expect any changes to the mobile app. Functional updates will continue to be released as previously planned in accordance to our roadmap, ensuring ongoing improvements without disruption to the user experience

## **Will the ACC user interface change or look different?**

The core functionality and layout of the ACC user interface will remain consistent, ensuring a smooth experience for existing users. There will be new Forma branding introduced and we will continue to deliver updates to the user experience as part of ongoing improvements to the product.

## **Why is Docs changing to Data Management?**

Autodesk Docs is evolving to better represent its role within the Forma industry cloud. A purpose-built, cloud-native common data environment (CDE) connecting AECO project data across the full asset lifecycle—planning, design, construction, and operations. To reflect this evolution, Autodesk Docs will be renamed Forma Data Management. The new name signals a move beyond file-based collaboration toward connected project data, supporting both files and more granular data as the AECO industry advances toward more hyper-collaborative, data-driven workflows.

## **When will the updated branding appear in Microsoft Power BI integration?**

The brand update to Power BI is targeted for the week of April 6, aligning with Microsoft's release schedule. This is a visual change only and your ability to use the Power BI connector will remain intact.
